

My client is a \$300Million, consumer products, manufacturing company (a division of a \$2Billion, publicly traded, Fortune 1000, consumer product company) looking to fill a newly created **Quality Engineer** position at their 600+ employee, non-union, high volume, growing operation in **Wayland, NY** (about 60 miles South of **Rochester, NY**).
Duties:

- Design, implement and manage quality control processes and sampling systems, procedures and statistical techniques.
- Develop and implement effective process control systems, including measurement systems and quality metrics.
- Provide manufacturing support by working on quality issues closely with manufacturing, product engineering, manufacturing supervision, production operators and maintenance.
- Facilitates and performs root cause analysis, develops effective corrective actions and corrective action verification plans.
- Develops and maintains detailed problem-solving documentation, reports and graphs.
- Leads problem-solving efforts using classical structured problem solving methodologies (i.e. Six Sigma, Shainin Red X Strategy, Design of Experiment, Statistical Engineering, 5 Why's, Fishbone diagrams) to investigate and solve complex related quality problems.
- Compensation: \$60-\$80K+Relocation+Excellent Benefits.

If you have any referrals, please forward this email and have them contact me directly using your name as the referring agent. If confidential referral, please forward contact info and I will contact them directly keeping your name CONFIDENTIAL.

I look forward to your response and any future networking/referrals.

Sincerely,

David Leong
