

JOB DESCRIPTION

QUALITY ENGINEER

JOB SUMMARY: Promote quality of products and processes through direct involvement in product design, corrective/preventive actions, and system improvements.

REPORTS TO: Quality Manager

ESSENTIAL DUTIES & RESPONSIBILITIES

- Develop & implement quality assurance methods, systems and procedures to maintain standards of product quality, accuracy and performance.
- Maintain & improve quality management system in compliance with quality requirements, ISO standards, and established objectives.
- Review internal & external issues to identify/analyze problems, establish root cause, and implement/evaluate solutions (CAPA).
- Provide quality input to product design process; monitor/facilitate project performance as it relates to verification of conformance to deliverables.
- Lead structured problem solving teams to promote continuous improvement & customer satisfaction.
- Interface with customers & compliance agencies; assist with internal & external audits.
- Comply with all regulatory & statutory requirements associated with assigned job activities.
- Perform other related duties as required.

REQUIREMENTS

- BS in Quality Management, Engineering, or related technical discipline, or equivalent experience.
- 5 years quality engineering, preferably in opto-mechanical manufacturing environment.
- ASQ CQE and/or CQA preferred
- Medical device background (ISO 13485/FDA) a plus
- Background with cross functional teams, effectively working with all levels of organization
- Excellent problem solving skills; strong initiative, good judgment, and organizational skills
- Familiarity with required quality and departmental procedures; attendance at required procedural and regulatory compliance training
